Summary

Detail-oriented software developer with progressive experience across software development, IT operations, and programming. Proven ability to deliver high-quality solutions with meticulous attention to detail. Driven by opportunities to contribute to meaningful projects that create tangible impact.

Education

Bachelor of Science in Computer Science

University of Sussex | Falmer, Brighton, United Kingdom | 2018 – Graduated: 2026

The School of Informatics provided the most rigorous academic experience of my life. A demanding mathematics and computer science curriculum with a strong emphasis on interdisciplinary research shaped my approach to problem-solving: analytical precision paired with creative thinking.

Experience

Software and Database Administrator

Revolent Group | Remote | 2021

- Administered and maintained database systems
- Assisted in software deployment and configuration
- Provided technical support for infrastructure operations

Junior TypeScript Developer

Cartographer.io | Brighton, United Kingdom | 2020

- Designed and implemented advanced TypeScript pipelines
- Developed Scala-based data processing workflows
- Collaborated on building scalable data transformation systems

Junior Compass Consultant

CMS Law UK | London, United Kingdom | Aug 2016 - Jan 2017

- Contributed to legal technology solutions
- Maintained and enhanced internal software systems
- Supported development of client-facing applications
- Transformed and owned multiple application-server architectures
- Competently operated directly under the Head of Department

Skills

- **Primary Language:** Java (Quarkus, Maven, JPA/Hibernate)
- **Other Languages:** Scala, TypeScript, JavaScript, Python, SQL
- **Frameworks & Tools:** React, Node.js, Docker, Git, Kubernetes, AWS
- **AI Workstation Applications:** Highly productive at accomplishing tasks with Workstation AI
- **Operating Systems:** Windows, Ubuntu, Debian, Red Hat (RHEL), Arch Linux
- **Methodologies:** Agile (Scrum/Kanban), Test-Driven Development (TDD), Continuous Integration / Continuous Deployment (CI/CD), Code Review, Pair Programming, Domain-Driven Design (DDD), RESTful API Design, Version Control (Git Flow, Trunk-Based Development)
- **Practices:** Debugging & Profiling, Performance Optimisation, Technical Documentation, Incident Response & On-Call, Test Automation, Security Best Practices (OWASP), Accessibility (WCAG)
- **Collaboration:** Cross-Functional Teamwork, Stakeholder Communication, Estimation & Planning
    - Knowledge Sharing & Mentoring

Projects

Academic Report Build System

Automated build pipeline for generating academic reports and documentation

- Developed custom build scripts for streamlined document generation
- Implemented automated workflows for LaTeX/Markdown compilation
- Available at: github.com/akinevz2/report-template

Resume Template System

Modern HTML resume generator using Pandoc and XP.css styling framework

- Created custom Pandoc template with Windows XP-inspired design
- Automated build process with Makefile and npm integration
- Demonstrates frontend design and build automation skills
- Available at: github.com/akinevz2/resume

Portable Development Environment

Mixed-style development environment based on an Ubuntu devcontainer.

- Supports running a nested AI agentic harness node with Bash integration
- Includes runtime-capable system reconfiguration support
- Available at: github.com/akinevz2/development

PagerTS

Secure command-line utility that transforms URLs into structured JSON objects

- Built with TypeScript, strict type checking, and modern ES2022 syntax
- Extracts all navigable items and resources from webpages using LinkeDOM
- Security-first design with URL validation, rate limiting, and XSS protection
- Supports local file paths, remote fetching, and concurrent request handling
- Available at: github.com/akinevz2/pagerts

Rarebert

Self-modifying scripting environment for interactive, AI-driven development

- Orchestrates `$EDITOR`, `git`, and `opencode` to scaffold and implement modules
- Memo subsystem threads observations between the model and shell across turns
- Each turn ends in a commit, keeping the working tree clean between cycles
- Supports per-language project libraries and multi-language module templates
- Available at: github.com/akinevz2/rarebert

Certifications

- Salesforce Database Administrator I - Salesforce
- Salesforce Software Developer I - Salesforce
